Optimize patient assistance to improve the financial performance of your organization

Ensure patient affordability—and minimize the number of bills written off or sent to collections—with **AssistPoint**®, a comprehensive software platform that accelerates the management of financial assistance and access services for healthcare organizations, helping patients get the care they need by proactively identifying available resources from a comprehensive library of over 9,000 assistance options, streamlining enrollment, and facilitating the management of assistance.

AssistPoint can enhance your organization's revenue stream by addressing common barriers to the management of patient assistance, including:

- Dozens of individual program portals to navigate, leading to time-intensive and cumbersome enrollment processes
- Having to check disease fund websites multiple times a day to avoid missing the opportunity to enroll patients when funding opens up
- Lack of interconnectivity between patient support programs and the practice management system, causing redundant data entry which can lead to errors and ultimately delay time to therapy
- Limited insight into the organization's financial performance as a result of not having a comprehensive view of patient assistance collections
- Missed opportunities for patient assistance collections, negatively impacting the organization's financial performance
- Lack of continuity in patient assistance operations when a staff member is absent, as there is no centralized platform for colleagues to work from

Technology that transforms the revenue cycle workflow

Ensure accuracy and efficiency

AssistPoint can be integrated with multiple systems—including electronic medical records, pharmacy management, practice management, billing, and revenue cycle management—to optimize your workflow.

Provide excellent customer service and communication

Accurate, up-to-date, and comprehensive patient assistance information for each individual patient is readily available within **AssistPoint**, so healthcare organizations are always well prepared to respond to questions from patients and other stakeholders.

Develop insights and strategies for ongoing improvement

AssistPoint equips healthcare organizations with a robust suite of analytics reports focused on revenue optimization. Available real time, these reports help organizations discover opportunities to increase revenue capture, informing day-to-day tasks as well as long-term planning.

Data security. Certified.

HITRUST Risk-based, 2-year (r2) Certification validates that Annexus Health is committed to strong cybersecurity and meeting key regulations to protect sensitive data.

Lack the human resources to utilize AssistPoint? Our Adparo[®] team can help.
